DRIZZLE	RAINBOW	HAIL	THUNDER	T. SHOWER	T. STORM	HAZE		Latest snow flurries on record at the Naked Creek Station on May 27, 1961

The rain gauge used in observations from 1958 to 1984 was about 2.5 - 3.0 inches square at the top. It was tapered to a smaller size at the bottom that exaggerated the scale more at the bottom than the top. This gauge worked poorly to measure snows particularly if they were more than 3 or 4 inches. This gauge was then replaced with a 4 inch plastic gauge that was scaled in hundredths of an inch on the inside cylinder.
